

Colouring Fun! Wind-up Toys

Let's chat about our childhood toys!

- 1) Wind-up toys can move on their own after a key is turned or a spring is pulled back. How do you imagine the toys pictured in this illustration will move when they are wound up and released? Try acting out the movements together with your parents!
- 2) If you could design your own wind-up toy, what would it be and which part of the toy would move?
- 3) What other things in your house need winding up sometimes in order to work?
